PremierResindrives.co.uk is a trading name of PremierResinDrives.co.uk Ltd
Providing quality Resin Bound Driveways, Patio's and Paths.

HOW WE INSTALL

LONG LASTING, QUALITY GUARANTEED DRIVES

POROUS SYSTEMS

Our Drives are totally porous which allows water to percolate through the resin bound surface, through three more layers that have been configured to be SuD's compliant.

RESIN BOUND COURSE

Your chosen aggregate is thoroughly mixed in a forced action mixer, and then poured over an open porous tarmac. It is then hard trowelled by our specialist installation team to create an even level finish.

OPEN POROUS TARMAC

Tarmac is mixed and poured to a depth of 65mm to create a load bearing surface drive that can hold up to 7.5 tonnes, this is then compacted with an 80 drive on roller.

SUB BASE

We use Ministry of Transport approved aggregate that is compacted up to 150mm depending on the required depth of the site and ground.

SUBSTRATE NATURAL BASE

Often clay, sand, shale or rock.

BENEFITS

OF PREMIER RESIN DRIVE TECHNOLOGY

STRENGTH & LONG LASTING

Durability of concrete with the look of loose gravel

LOW MAINTENANCE

Easy to clean and maintain

ADD VALUE TO YOUR PROPERTY

Your house will stand out from the rest and increase in value

CUSTOMER JOURNEY

1. THE BEGINNING

Once you've registered your interest either via the website, Facebook or via phone, one of our Project Managers will call you to confirm a suitable time to come out and meet you at your home or business to discuss your project.

2. REVIEWING YOUR PROPOSED PROJECT

At a time convenient to you and at your property, your assigned Project Manager will arrive promptly to: Review your space and take accurate measurements, Present resin colour samples for your selection

Ask questions to ensure that every detail of your project is achieved, Provide a quotation for the full installation, And most simply, get to know you to fully understand your vision in order to sketch and design your proposed project.

This as a FREE Premier Resin Drives (Consultation, Design & Quotation) Service!

3. WHAT HAPPENS NEXT?

Once both parties are happy with the design, you will continue to deal directly with your Project Manager who will arrange timings, keep you aware of who will be coming to your property and walk you through the next steps in the process. As your direct point of contact throughout the installation, you can call your Project Manager at anytime with any queries or concerns.

4. THE PREPARATION PHASE

It's nearly time for the design to become reality, but first we fully prepare your space ahead of installation to ensure there are no unforeseen issues or delays. This includes organising waste removal, ensuring necessary machines are available and on-site (diggers, compactor machinery etc.) and checking that the correct materials and amounts have been ordered ahead of installation date.

5. CHECKLIST

Once the preparation checklist is marked as complete - weather permitting, your install will go ahead without a hiccup and on time. Your Project Manager will always keep you updated.

6. OVERLAY VS DIG OUT

There are two types of installation - overlay & full dig out. If full dig out is required, we will kick off the excavation process meaning we remove existing ground (e.g. grass) and prepare for your new surface to be installed, whether it's tarmac, paving or resin. Weather and project size will determine the time-frame for these activities. Your project manager can provide a rough estimate during their initial visit to your property (Step 2).

7. ONTO THE INSTALLATION

Once preparation is complete, our experienced installers will arrive on-site to lay your resin bound design with efficiency and to an impeccable finish. Delivering stable and high quality resin bound system and achieving your dream project is our sole purpose. At Premier Resin Drives, our teams consists of hand-picked specialists who are friendly, passionate about their work and highly experienced in the field meaning you will only receive high quality workmanship and delivery - 100% satisfaction guaranteed. All workers are approved by our Director meaning all risks are fully owned by us.

8. RESIN SET & SAFE TO USE?

Your Project Manager will advise you that the resin requires between 5 and 7 hours to set before it can be walked on. Note, this includes any friendly felines or doggy friends to ensure your new project is paw-print free. You should also allow at least 72 hours before driving your vehicle on the resin. Once this time has passed, you are free to enjoy! All feedback is welcomed to ensure that we continue to provide the highest standard of work and customer service.

9. QUALITY ASSURANCE

Finally, your Project Manager will attend your property upon completion to perform quality assurance checks and ensure your dream project has been delivered successfully. Don't forget, we provide a full 3 year guarantee on all installations so that you have optimal peace of mind. At Premier Resin Drives, your satisfaction and happiness is paramount so we are always on hand to take your call.
